INSTAGRAM GRID PLANNER

Preview your next posts in Instagram's 3:4 profile grid, reorder them, and split one image into a three-column grid with the posting order.

Updated October 17, 2026 · chatinflow.com/free-tools/grid-preview

HOW DOES THE INSTAGRAM PROFILE GRID CROP MY POSTS?

The profile grid shows each post in a 3:4 tile, three across. A 4:5 or square post loses its sides in the grid and a 9:16 reel loses its top and bottom. The preview shows your next posts exactly that way, lets you reorder them, and can split one image into a three-column grid with the order to post the tiles.

HOW THE 3:4 GRID CROPS EACH SHAPE

Post	Grid shows	Hidden
Portrait post 4:5	1013 × 1350 px	6%
Square post 1:1	810 × 1080 px	25%
Landscape post 1.91:1	425 × 566 px	61%
Reel 9:16	1080 × 1440 px	25%

POSTING ORDER FOR A SPLIT GRID

Rows	Tiles	Post first	Post last
1	3	Bottom right	Top left
2	6	Bottom right	Top left
3	9	Bottom right	Top left
4	12	Bottom right	Top left

Each tile is 1080 × 1440 px (3:4). The newest post lands top left, so the last tile you post completes the picture.

YOUR NEXT TWELVE POSTS

Slot	Post	Shape	Goal

USE THE FREE GRID PREVIEW

1. **Add your next posts.** Up to 12 images; each new one goes to the top left, as a new post would.
2. **Reorder them.** Drag tiles or use the arrows until the grid reads the way you want.
3. **Or split one image.** Cut a picture into one to four rows of three, numbered in posting order, in a ZIP.

QUESTIONS PEOPLE ASK

What aspect ratio is the Instagram grid?

Profile tiles are 3:4, taller than square. Posts still upload as 4:5, square or 9:16, and the grid shows the middle of each one at 3:4.

In what order do I post a split grid?

Start with the bottom right tile and end with the top left. The newest post always lands top left, so the last tile you post completes the picture. The files are numbered in that order.

Can I see how my grid looks with the old square tiles?

Yes. Switch the preview to the square grid to compare both crops before you post.
