PHOTO WATERMARK GUIDE

Put your name or logo on up to 20 photos at once, in a corner, the center or tiled across, with your size and opacity, and download a ZIP.

Updated October 17, 2026 · chatinflow.com/free-tools/watermark-photos

HOW DO I ADD A WATERMARK TO MANY PHOTOS AT ONCE?

Choose the photos, type your name or handle or pick a logo, set the corner, the size and the opacity, and download them all in a ZIP. Each photo keeps its own size and gets the same mark in the same place. Everything happens in your browser, so the photos never leave your device.

PLACEMENT BY USE

Use	Position	Opacity
Posts and stories	A corner	40–60%
Portfolio	A corner or the center	50–70%
Previews before payment	Tiled across	30–50%

Marks sit 4% of the short side away from the edge; tiles turn 30 degrees.

A MARK THAT STAYS READABLE

- [ ] Your handle or site, not a long sentence.
- [ ] White on dark photos, black on light ones, or a logo PNG with a transparent background.
- [ ] Big enough to read on a phone, small enough to leave the product the hero.

A BATCH WORKFLOW

Shoot and edit
Finish color and crop first; the mark goes on last.

Mark the batch
Up to 20 photos at a time, same mark and place on all.

Keep the originals
Store the unmarked files; send them only after payment.

USE THE FREE WATERMARK PHOTOS

1. **Choose the photos.** Up to 20 at a time, any size.
2. **Set the mark.** Text or a PNG logo, in a corner, the center or tiled across, with size and opacity.
3. **Download the ZIP.** Every photo comes back marked, named after the original.

QUESTIONS PEOPLE ASK

Where should a watermark go?

A corner with low opacity keeps the photo clean for posts. Tiled across the photo is harder to crop out, which suits previews you send before payment.

Does a watermark stop people from stealing photos?

It makes reuse harder and keeps your name on shared copies, but a determined person can still crop or edit it. Tiled marks are the hardest to remove.

Are my photos uploaded?

No. They are opened, marked and saved in your browser.
