SEAMLESS CAROUSEL GUIDE

Cut a wide photo or design into 2 to 10 seamless carousel slides in 4:5 or 1:1 at 1080 px, and download them all as a ZIP.

Updated October 17, 2026 · chatinflow.com/free-tools/carousel-splitter

HOW DO I MAKE A SEAMLESS INSTAGRAM CAROUSEL?

Make one wide image, then cut it into equal slides of the same shape: 1080 by 1350 for portrait or 1080 by 1080 for square. Posted in order in one carousel, the slides join when people swipe. The splitter crops the image to the right total shape, cuts it without a gap and downloads every slide in a ZIP.

SOURCE WIDTH FOR SHARP SLIDES

Slides	Portrait 4:5	Square 1:1
2	2,160 × 1350 px	2,160 × 1080 px
3	3,240 × 1350 px	3,240 × 1080 px
4	4,320 × 1350 px	4,320 × 1080 px
5	5,400 × 1350 px	5,400 × 1080 px
6	6,480 × 1350 px	6,480 × 1080 px
8	8,640 × 1350 px	8,640 × 1080 px
10	10,800 × 1350 px	10,800 × 1080 px

A narrower image still works; the slides are then enlarged and can look soft.

DESIGNING ACROSS THE SEAMS

- [ ] Do not put a face or a word right on a cut line: one swipe would split it.
- [ ] Let a shape or a line run across a seam to pull the eye to the next slide.
- [ ] Give the first slide a reason to swipe on its own, it is the one people see in the feed.
- [ ] End on a slide with one clear call to action.

POSTING THE CAROUSEL

Order
Add the files in their number order in one carousel post.

Shape
Keep every slide the same shape; Instagram crops a carousel to the first slide's shape.

Last slide
Ask for a keyword in the comments and let an automation send the link in DMs.

USE THE FREE CAROUSEL SPLITTER

1. **Choose a wide image.** A panorama, a design made for the carousel or any landscape photo.
2. **Pick the shape and the count.** Portrait 4:5 or square, 2 to 10 slides, and which part of the image to keep.
3. **Download and post in order.** Get all slides in one ZIP, numbered, and add them to one carousel in that order.

QUESTIONS PEOPLE ASK

What size should carousel slides be?
1080 pixels wide: 1080 by 1350 for portrait 4:5 or 1080 by 1080 for square. Every slide in one carousel has the same shape, which is what makes a seamless swipe possible.

How wide should my image be?
1080 pixels times the number of slides keeps every slide sharp: 3,240 pixels for three slides, 5,400 for five. A narrower image still works, but the slides are enlarged and can look soft.

Can I split an image into a 3 by 3 grid instead?
Yes, with the Grid Preview tool. It cuts one image into three columns for your profile and numbers the tiles in the order to post them.
